

Figures Report

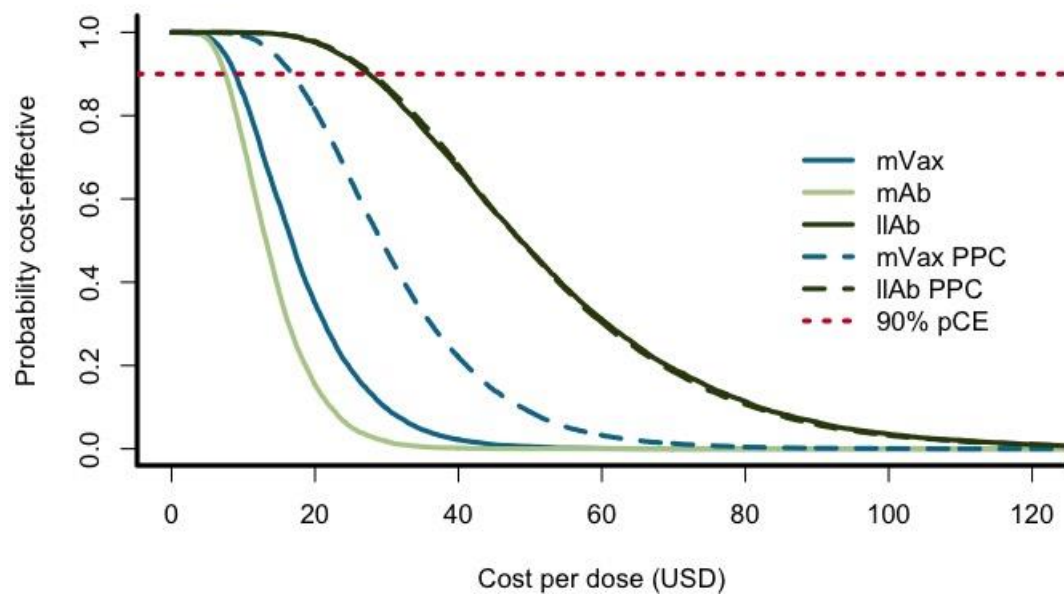

April 21 , 2020

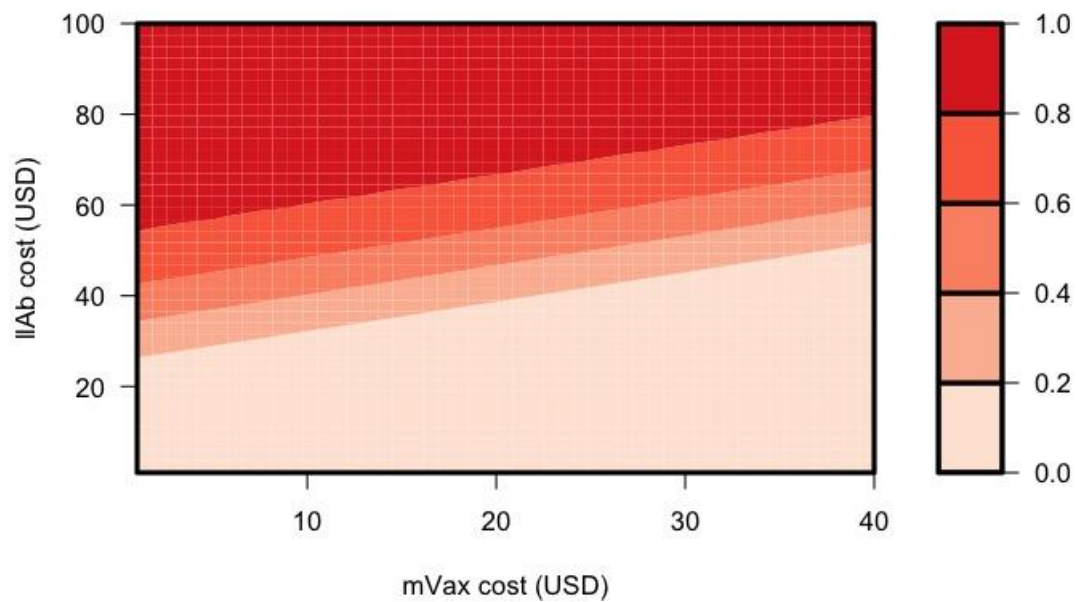

Disability-adjusted life years (DALYs) averted as coverage increases for each intervention.

Incremental cost-effectiveness ratio (ICER) as cost per dose increases for each intervention. The red dashed line indicates the cost-effective threshold, equal to the per capita GDP of Mali.

Probability each intervention is cost-effective at a given cost-per dose

Probability mVax has greater net health benefits than lIAb at a given cost per dose for each intervention
